DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, drawn to a composition comprising a peptide defined by SEQ ID NO:14 or 15, and portions thereof, classified in class 514, subclasses 15 and 17.
- II. Claim 3, drawn to an antibody to a peptide defined by SEQ ID NO:14 or 15, and portions thereof, classified in class 530, subclass 387.9.
- III. Claims 4-7, drawn to a method for reducing the ability of neutrophils to bind full length human C5a peptide comprising mixing neutrophils with a peptide defined by SEQ ID NO:14 or 15, and portions thereof, classified in class 435, subclass 7.2.
- IV. Claims 8-11, drawn to a method for inhibiting the C5a activation of neutrophils comprising treating said neutrophils with a peptide defined by SEQ ID NO:14 or 15, and portions thereof, classified in class 435, subclass 7.2.

The inventions are distinct, each from the other because of the following reasons:

Groups I and II are unique products. Though both Groups are drawn to proteins, Group II encompasses antibodies which differ from the protein of Group I with respect to its structure and associated physicochemical properties. Therefore Groups I and II are patentably distinct.

Groups III and IV are unique methods. They differ with respect to their respective endpoints and are therefore patentably distinct, each from the other.

Groups I and III are related as product and process of use, as are Groups I and IV. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. 806.05(h)). In the present case, the product as claimed, the peptide, can be used as an immunogen in a method to produce antibody secreting hybridomas, as well as in a method for inhibiting the C5a activation of neutrophils or in a method for reducing the ability of neutrophils to bind full length human C5a peptide.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and because a search in the non-patent literature of any of these distinct inventions would not be co-extensive with a search of the others, an examination and search of two or more inventions in a single

Art Unit: 1644

application would constitute a serious undue burden on the Examiner, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
